Quick Facts about the National Hearing Test

**What is it?** The National Hearing Test is a screening test for hearing loss that is self-administered simply and conveniently over the telephone.

**Why is it important?** Approximately 36 million Americans have significant hearing loss, yet as many as half have never had their hearing tested. Untreated hearing loss can lead to a serious decline in your quality of life, causing social isolation, problems on the job, and frequent embarrassment. The National Hearing Test is a simple and scientifically validated screening test. It can be the first step on your path to taking charge of your hearing health.

**Who developed it?** The test was developed through a collaboration between Communication Disorders Technology, Inc., Indiana University, and VU University Medical Center of Amsterdam. The National Telephone Test was developed with the support of the National Institute for Deafness and other Communication Disorders of the National Institutes of Health, under Grant No. 3R43DC009719. The content of this website is solely the responsibility of the authors and does not necessarily represent the official views of the National Institutes of Health.

Communication Disorders Technology, Inc (CDT). CDT was formed in 1989 by Charles S. Watson and Diane Kewley-Port, Professors of Speech and Hearing Sciences at Indiana University, and Daniel P. Maki, Professor of Mathematics at Indiana University.

**How does the test work?** You simply call from a landline phone and enter your Access Code to start the test. You listen to three-digit sequences that are spoken with a noise background. and use the keypad to enter what you heard. If you are doing well, the test becomes more difficult, by making it harder to hear the digits. If you are making errors, the test gets easier. This method provides a very accurate assessment of your ability to distinguish spoken words in different levels of background noise. Immediately after the test, you are told the results for each ear, which will help you make an informed decision as to whether you should see an audiologist to have a complete hearing evaluation.

**How much does it cost?** The test is $5. To purchase the test, visit www.nationalhearingtest.org. We offer individual tests as well as bulk licensing options for businesses and organizations.

**What kind of hearing loss does the test detect?** This hearing screening is very effective at detecting the most common forms of hearing losses, those that are age-related and those that result from exposure to loud noises.
FOR IMMEDIATE RELEASE

Now Screening Yourself For Hearing Loss
Is (Almost) As Easy As Ignoring It

*Free phone-based screening has helped nearly 40,000 people with affordable, accurate, widely available test – aims to reach 100,000 by end of year*

BLOOMINGTON, INDIANA – October, 2014 – It is no wonder so many of us avoid having our hearing tested, even if we suspect it might need help. We’re confused about where to get an unbiased hearing test, who should perform it and how much it will cost. Not to mention the fear that companies will pursue us without mercy, trying to sell us expensive solutions. Who needs the aggravation?

The scientists who developed the National Hearing Test with funding from the National Institutes of Health have simplified the first step to helping you take control of your hearing health. Just pick up your phone.

The not-for-profit, telephone-based National Hearing Test accurately assesses your hearing in ten minutes as normal, slightly below normal or substantially below normal for each ear. It presents a series of digits you identify against a background of noise, much like the way we might experience hearing loss at family dinners, large gatherings and movies.

You can take the test at home, at the office or in any quiet place with a landline phone, and receive the results immediately. There is no sales pitch after the test. If your hearing is below normal, the National Hearing Test will simply suggest you follow up by seeing an audiologist or other certified hearing professional of your choice. That’s it.

You don’t have to make an appointment or drive anywhere, and you can take the test any time you like by purchasing an access code at [www.nationalhearingtest.org](http://www.nationalhearingtest.org), then calling the toll-free National Hearing Test line at (866) 223-7575. The cost is $5, to cover the expense of offering the test.

The first test of its kind in the United States, the National Hearing Test overcomes many obstacles preventing people from being screened for hearing loss. It is the country’s only convenient, affordable, scientifically validated hearing screening test delivered over a plain old telephone.

“Research shows that early intervention in hearing loss leads to better quality of life and greater success with hearing aids,” said Dr. Charles S. Watson, chief scientist for the test in the United States and
professor emeritus of speech and hearing sciences at Indiana University, Bloomington. “Consequently, it’s important for anyone who suspects they’ve suffered hearing loss to have their hearing tested and that a low-cost, convenient test be made widely available.”

Dr. Watson stressed, “While the telephone-administered test provides an accurate estimate of a person’s hearing in the speech-frequency range, it is not a substitute for a full hearing evaluation by an audiologist. The screening test is for those who suspect they might have a hearing problem but are not sufficiently convinced to make that appointment. Some callers pass the test and are relieved, while others fail and are advised to seek a full evaluation.”

About the National Hearing Test Project
The National Hearing Test is administered by Bloomington, Indiana-based Communication Disorders Technology, Inc., in partnership with Indiana University and the VU Medical Center of Amsterdam, and with the support of the National Institute for Deafness and Other Communication Disorders of the National Institutes of Health, under Grant No. 3R43DC009719.

Learn more about the National Hearing Test at www.nationalhearingtest.org. To take the National Hearing Test, obtain a code at that site and call the test line at (866) 223-7575.

About Communication Disorders Technology, Inc.
Founded in 1989 by two speech and hearing researchers and a mathematician at Indiana University, Communication Disorders Technology, Inc., develops software to treat speech, language and hearing disorders. Visit Communications Disorders Technology, Inc., online at www.comdistec.com.
Scientists Who Developed the Test

Charles S. Watson
Principal investigator, development of the U.S. version of the National Hearing Test
Former chair, Department of Speech and Hearing Sciences at Indiana University
Former Director of Research, Boys Town National Research Hospital in Omaha
President, Communication Disorders Technology, Inc.

Larry Humes
Distinguished Professor, Department of Speech & Hearing Sciences, Indiana University
Chair, Department of Speech & Hearing Sciences, Indiana University

Gary Kidd
Associate Scientist, Department of Speech & Hearing Sciences, Indiana University
Senior Scientist, Communication Disorders Technology, Inc.

James Miller
Principal Scientist, Communication Disorders Technology, Inc.
Emeritus Director of Research, Central Institute for the Deaf in St. Louis
Adjunct Professor, Department of Speech and Hearing Sciences at Indiana University
Professor Emeritus, Washington University in St. Louis

Cas Smits
Professor, Engineering & Biophysics
VU University Medical Center, Amsterdam
Originator of digits-in-noise test first used in the Netherlands and later replicated in many countries
